What is Repogram?

The word repogram comes from the words "Repository" and "Chromograms"

- So what is a "Repository"?

A repository is a collection of source code files used to develop programs or to manage other files. If you ever used GitHub, you will surely have a so called repository.

- Ok, clear on that. What is a "Chromogram"?

A chromogram is an intelligent visualization method. It can display a huge amount of content on a small image. It usually uses blocks.

Read that. So how can I use this site?

That's an easy one.

Watch this video:

TODO! Video!

Do you have some examples?

Twitter Bootstrap

JQuery

Repograms - Quick Help

This website renders chromograms of your git repository.
To start just enter your repository URL and click on visualize.

To see some examples, just choose one from below and then click

 Visualize!

Large repository may need some time to be downloaded and processed.
So please be patient and get some coffee while waiting :)
